There are no restrictions on its use by non-profit institutions and one solvent is in no way modified and this statement is not removed. Usage by and for commercial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (See http://www.isb-sib.ch/announce/
                                                                                                                                                                                                                                                                                                            ELT. J. BIOCHEM. 139:467-479(1984).

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS

OF THE VERTEBRATE EYE LENS.

-!- SUBJUILT: HOMO/HETEROJINER, OR COMPLEXES OF HIGHER ORDER. THE
STRUCTURE OF BETA-CRYSTALLIN OLIGOMERS SEEMS TO BE STABILIZED
THROUGH INTERACTIONS BETWEEN THE N-TERMINAL ARMS (BY SIMILARITY).

-!- DOMAIN: HAS A TWO-DOMAIN BETA-STRUCTURE, FOLDED INTO FOUR
VERY SIMILAR GREEK KEY MOTITES.

-!- SIMILARITY: BELONGS TO THE BETA/GAMMA-CRYSTALLIN FAMILY.
                                                                                                                               TISSUE=Lens cortex;

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS OF THE VERTEBRATE EYE LENS.

-!- SUBUNIT: HOMO/HETERODIMER, OR COMPLEXES OF HIGHER ORDER. THE STRUCTURE OF BETA-CRYSTALLIN OLICOMERS SEEMS TO BE STRAILIZED THROUGH INVERACTIONS BETWERN THE N-TERMINAL ARMS (BY SIMILARITY).

-!- DOMAIN: HAS A TWO-DOMAIN BETA-STRUCTURE, FOLDED INTO FOUR VERY SIMILAR (BREEK KEY MOTIFS).

-!- MASS SPECTROMETRY: MM-24222; MM ERR=3; METHOD=Electrospray.

-!- SIMILARITY: BELONGS TO THE BETA/GAMMA-CRYSTALLIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                   "Sequence analysis of beta-A2-, beta-A4- and beta-B3-crystallin CDNA completes the identification of the members of this gene family in the
                                                                                                      Submitted (FEB-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS

-!- SUBUNIT: HOWO/HETERODIMEN, OR COMPLEXES OF HIGHER ORDER. THE
STRUCTURE OF BETA-CRYSTALLIN OLIGOMERS SEEMS TO BE STABILIZED
THROUGH INTERACTIONS BETWEEN THE N-TERMINAL ARMS (BY SIMILARITY).

-!- DOMAIN: HAS A TWO-DOMAIN BETA-STRUCTURE, FOLDED INTO FOUR
VERY SIMILAR GREEK KEY MOTIFS.

-!- SIMILARITY: BELONGS TO THE BETA/GAMMA-CRYSTALLIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

```
This invention describes a novel antibody specifically recognizing phosphatidylinositol-3.4,5-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead Salmonella genus microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunoassay contraining a step in which the above antibody or its variable region is reacted with PIP3 present in a sample and the bond based on their immunological reaction. The method can determine PIP3 easily in a high sensitivity. This sequence represents the mutine PIP3 recognizing monoclonal antibody variable region heavy chain complementarity determining region, CDR2 described in the method of

The invention relates to isolated polymulaterize (1) and polymerase chain reaction (FCR) primers, oligomers, and for chromosome polymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques of recommal activity of (II) of to to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polymeptide and polymucleotide sequences have applications in capponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and continuous acid sequences of the invention.

Catagnostic amino acid sequences of the invention.

Catagnostic amino acid sequences of the invention.

bank is described. The protein is identified by the presence of a hydrophobic N-terminal secretory signal region, knowledge of the protein is identified by the presence of a protein by the problem. The terminal secretory signal region, knowledge of the protein function is not required, as in e.g. methods of expression cloning. The cDNAs encode proteins comprising transmembrane domains of and can be used as probes for gene diagnosis and gene sources for gene therapy. Abnormalities of Membrane proteins are associated with a number of hitherto-cryptogenic diseases. e.g. cystic fibrosis. Polynuclectides and proteins of the invention can be used in research; as nutritional supplements; for cell proliferation; cell differentiation or cytokine activity or to induce the production of cytokines; for immune stimulating or suppressing activity; for tissue growth activity; for haemostatic and thrombolytic activity, for receptor/ligand activity; for themotactic/chemokinetic activity; for haemostatic and thrombolytic activity for receptor/ligand activity; for anti-inflammatory activity or for tumour inhibition activity. A search of a protein database revealed no proteins having an allogy with this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transmembrane protein, transmembrane domain, translocation protein, endoplasmic reticulum; sec61 alpha subunit, research; probe; diagnosis; gene therapy; nutritional supplement; cytokine proliferation; cell proliferation; cell differentiation; haemactopiesis regulation; tissue growth; activin; inhibin; chemotactic activity; chemotinesis; haemostasis; thrombolysis; receptor; ligand; anti-inflammatory; tumour inhibition;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NDC-1
                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO anti-PRO antibodies, agonists and antisonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, osteoarthritis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, cautoimmune or immune-mediated skin diseases, allergic diseases, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease. AACSS337 to AACSS337 to AACSS337 represent PCR primers and hybridisation probes used the isolation of human PRO polymucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                          Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Membrane-bound polypeptide; PRO polypeptide; LDL receptor; TIE ligand; pharmaceutical; receptor immunoadhesin; gene mapping.

polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE Iligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapphing and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, albumin, HA, immune system disorder; transplant rejection; blood related disorder; myocardial infarction; glomerulonephritis; hyperproliferative disorder; childhood acute myeloid leukaemia; renal cell carcinoma; cardiovascular disorder; vulnerary; melanoma; arrhythmia; respiratory disorder; non-allergic rhinitis; antileukaemic; neurological disease; Alzheimer's disease; endocrine disorder; measles; phecoytochroma; reproductive system disorder; neuroprotective; syphilis; infectious disease; gastrointestinal disorder; neuroprotective; syphilis; irritable bowel syndrome; HIV; human immunodeficancy virus infection; cytostatic; antiinflammatory; gene therapy; immunosuppressive; cardiant; antiarthritic; antirheumatic; renal disorder; antimicrobial.

Nucleic acids encoding albumin fusion protein is used in gene therapy. The present sequence is a human protein related
invention relates to human albumin (HA) fusion proteins and their
                                                                                                                                                                                                                                                                                                                                                               Gaps
             corresponding nucleic acid sequences. Therapeutic proteins fused to albumin or its fragments have an extended shelf-life. The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disases uch as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood

ANU12172-AAV12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumours by constrong the proliferation of chondrocytes, the proliferation of chondrocytes, the proliferation of chondrocytes, the proliferation of inner ear utricular supporting cells or cartilade, the release of proteoglycans from cartilade, the proliferation of inner ear utricular supporting cells or C T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide contends in assays to identify be contended in assays to identify and contended in a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; diagnosis; immunomodulatory; antisclerotic; dermatological; immunosupressive; antinflammatory; anti-HIV; immunostimulant; cytostatic; cardiant; vascular; anti-angiogenic; ophthalmological; neuroprotectant; nootropic; anticonvulsant; vaccine; antialzahmer; antiparkinsonian; antimarcobial; vulnerary; gene therapy; immune disorder; hyperproliferative disorder; cardiovascular disease; cancer; angiogenic disorder; neurological disorder; infectious disease;

The present invention provides the protein and coding sequences of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human and rat metastasis-associated antigen C4.4A. The protein is expressed rarely in the adult, except on metastasising cancer cells. Because of this, the sequences are useful in cancer diagnosis and treatment of cell proliferation diseases. The present sequence is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; secreted and transmembrane protein; PRO; cytostatic; cell death; cancer; chromosomal mapping; gene mapping; tissue typing; diagnostic assay.
                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid encoding rat or human metastasis-associated antigen C4.4A for treating cell proliferative disorder associated with a metastasizing tumor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAF81787 to AAF81817 encode the human secreted proteins given in AAB74733 to AAB74772. Human secreted proteins can have activities based on the tissues and cells they are expressed in. Example of activities include: immunomodulatory; antisclerotic; dermatological; immunosuppressive; antisclerotic; dermatological; immunosuppressive; antisclerotic; ophthalmological; neuroprotectant; noctropic; canticorvulaant; antialzhehimers; antiparkinsonian; antimicrobial; and vulnerary. Human secreted proteins can be used in gene therapy and vulnerary. Human secreted protein ucleotide sequences (NAM1) and proteins (PEPI) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. For example, NAM1 and PEPI may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patients genome the artifict that affect the activity of proteins by expressing in a patients genome the activity of proteins by expressing in a patients genome the activity of proteins by expressing in a patients genome the activity of proteins by expressing in a patients genome the activity of proteins proteins and proteins or deletions in a patients genome the activity of proteins proteins proteins and proteins proteins and proteins proteins proteins proteins and proteins and proteins proteins proteins proteins proteins proteins and proteins proteins proteins and proteins protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hyperproliferative disorders (e.g. cancers), cardiovascular diseases, angiogenic disorders, indections diseases and/or for promoting wound healing, regeneration and /or chemotaxis, AAF81778 to AAF81786 and AAB74732 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to supplement the patients own production of polypeptides. Disorders that may be prevented, diagnosed and/or treated include immune disorders,

The present sequence is one of twenty eight novel PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Twenty eight nucleic acids encoding PRO polypeptides which are useful for treating various tumors, e.g. breast cancer, and other inflammatory, angiogenic and immunological disorders -

  ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO mucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AFA44270 to AFA44470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAR44087 to AAR44269 and AAB65180 to PREPERSON PRO PROJYMUCLEOTIGE and protein sequences given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to albumin fusion proteins comprising a albumin, HaA). The protein X and human albumin (HA, also known as human serum albumin, HsA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyellitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis) ABG63326-ABG65518 represent albumin

                                                          PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma healing. The present sequence is a PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                    Human; angiogenesis; cardiant; cytostatic; antiangiogenic; hypotensive; vulnerary; antiarteriosclerotic; PRO agonist; PRO antagonist; trauma; gene therapy; cardiovascular disorder; endothelial disorder; cancer; angiogenic disorder; cardiac hypertrophy; atherosclerosis; hypertension; age-related macular degeneration; arterial restenosis; angina; rheumatoid arthritis; mycardial infarction; thrombophlebitis; lymphangitis; tumour angiogenesis; breast carcinoma; liver carcinoma; wound healing; chromosome mapping; gene mapping.
                                                   present invention provides the protein and coding sequences of human
useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal
                                                                                                                                                                                   .

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polymucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polymucleotides, proteins, agoniets and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular rheumatoid arthritis, angina, mypertension, arterial restenoiss, rheumatoid arthritis, angina, mypoardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Paoni NF;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder.

measuring human gene expression in sample derived from human foetal liver. The single exon nucleic acid probes may be used from predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein #8990 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
                                                                                                                                                                                                                                                                                                                                                                                   Claim 27; SEQ ID NO 36736; 639pp + sequence listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, gene expression, heart, microarray, vascular system;

                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of stress expressing (II). (I) and (II) are useful in medical imaging of stres expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fip. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                   ô
                                                                                              measuring human gene expression in a sample derived from human heart (see ARA12135. ARA141305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                                                                                                                   By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                      Human brain expressed single exon probe encoded protein SEQ ID NO: 37228.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample darived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide #8167 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included
                                                                                                                                                                                                                                                                                                               Human peptide encoded by genome-derived single exon probe SEQ ID 36526
                                                                                                                                                                                                                                                                                                                                              Human; single exon probe; asthma; lung cancer; CODD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tubercous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histlocytosis; lymphangioleiomyomcosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -

in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several. tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes of the exons should frames (ORF). The probes are used for gene probesopen reading frames (ORF). The probes are used for gene probesopen neading frames (ORF). The study of lung diseases such as asthma, lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease. (COPP), interstitial lung disease (ILD), familial idiopathic pulmonary fibroais, neurofibromatosis, tubercous sclerosis, Gaucher's disease. Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcioldosis, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                             encoded by a single exon probe of the invention is a peptide/protein Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from WIPO at
                                                                                                                                                                                                                                                                                                                  haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiucer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; food additive; preservative; chromosome identification; cancer; female reproductive system disorder; immune disorder; wound healing; cardiovascular disorder; neurological disease; infectious disease;
